What's my memory usage?

I'm still under development and don't have the ability to track your memory usage in the MIRIX s directly. Perhaps you could ask the system administrator for that information.

Tell me about artificial intelligence

Artificial intelligence (AI) is a broad field encompassing the development of computer systems ca performing tasks that typically require human intelligence. These tasks can include learning, pro solving, decision-making, speech recognition, and visual perception.

There are many different approaches to AI, and the field is constantly evolving. Some key areas o research and development include:

- Machine Learning (ML):** This involves training algorithms on large datasets to allow them to patterns and make predictions or decisions without being explicitly programmed.
- Deep Learning:** A subset of machine learning that uses artificial neural networks with multip analyze data and identify complex patterns.
- Natural Language Processing (NLP):** Focuses on enabling computers to understand, interpr generate human language.
- Computer Vision:** Allows computers to "see" and interpret images and videos.
- Robotics:** Combines AI with physical robots to perform tasks in the real world.

The applications of AI are vast and growing rapidly, spanning fields such as healthcare, finance, transportation, manufacturing, and entertainment. As AI continues to advance, it has the potenti significantly impact many aspects of our lives.
